

Dashboards: Core and Connectivity

BOX310

Goals

- Create and format a dashboard
- Add interactivity to allow a user to control the data displayed in a dashboard
- Connect your dashboard to live data sources

Audience

- Business Analysts
- Report Designers

Prerequisites

Essential

- Windows conventions
- Basic computer skills and database concepts
- Microsoft Excel

Recommended

- Familiarity with BusinessObjects Enterprise, Crystal Reports, or Live Office
- Ability to create summarized data from tabular data
- Experience creating database queries

Course based on software release

- SAP BusinessObjects Dashboards

Content

- Create a dashboard
- Format a dashboard
- Add interactivity to a dashboard
- Create a connected dashboard

Notes

- SAP BusinessObjects™ Dashboards 4.0 enables you to transform Excel workbooks into captivating dashboards with the ability to provide interactive what-if analysis. Use Dashboards to build engaging dashboards for executives and business users. Dashboards provide insight into complex data and deliver confidence to those who use the dashboard to make decisions.
- As a business benefit, you will be able to connect your dashboards to any data source and provide everyone in your organization with up-to-the-minute personalized data. You'll manage multiple data sources by controlling all live data connections from one central interface. You will improve your productivity by manipulating and linking your data to visually compelling analytics in a single design.
